Introducing VODOOFLEX RGBW from our URBAN LINES collection—an exceptional range of professional-grade LED strips. With years of expertise in flexible LED strip lighting and a keen focus on addressing user requirements, VODOOFLEX RGBW represents the pinnacle of innovation. Featuring a dual layer heavy copper FPCB, meticulously designed to minimize voltage drop and enhance the transfer of heat. This engineering feat ensures optimal performance and durability.

For unbeatable adhesion to various surfaces, we employ commercial grade 3M VHB double-sided adhesive. This reliable bonding agent guarantees a secure and long-lasting attachment, whilst offering vibration dampening providing peace of mind even in the most demanding applications.

Moreover, our high-density SMD LED design sets VODOOFLEX apart, substantially reducing visible dotting when installed within an aluminum profile. This thoughtful engineering creates a seamless lighting experience, free from distracting imperfections.

Whether you're an industry professional or a discerning user seeking top-notch LED strip lighting, VODOOFLEX RGB & RGBW surpasses expectations, combining advanced technology, exceptional reliability, and stunning visual appeal.
